

Updating iRespond Software

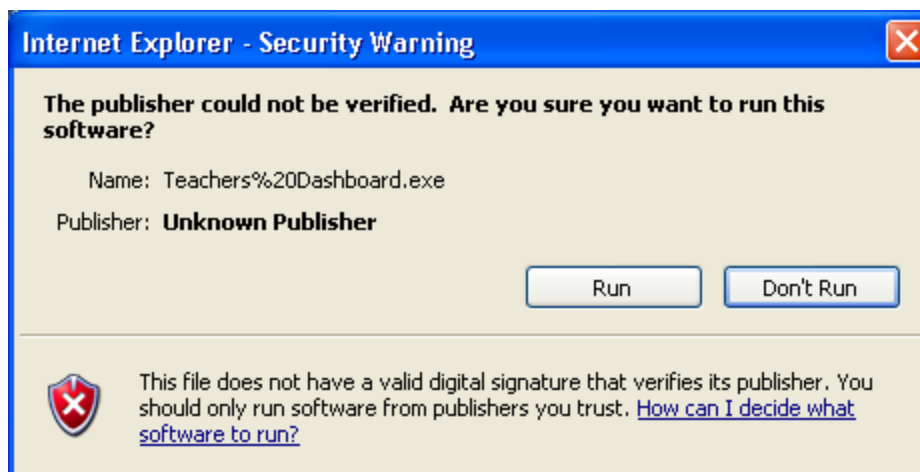

The following procedure outlines the steps to update the iRespond software.

1. From the iRespond Software Downloads screen select the latest iRespond Software release located underneath Teacher's Dashboard. A File Download box will open asking if the download is to be run or saved. If Save is selected, the executable file will be saved to the computer or disk to be run at a future date. If Run is selected, the executable file will download the newest version of iRespond's Teacher's Dashboard. The download could take up to 5 to 6 minutes to complete depending on the computer.

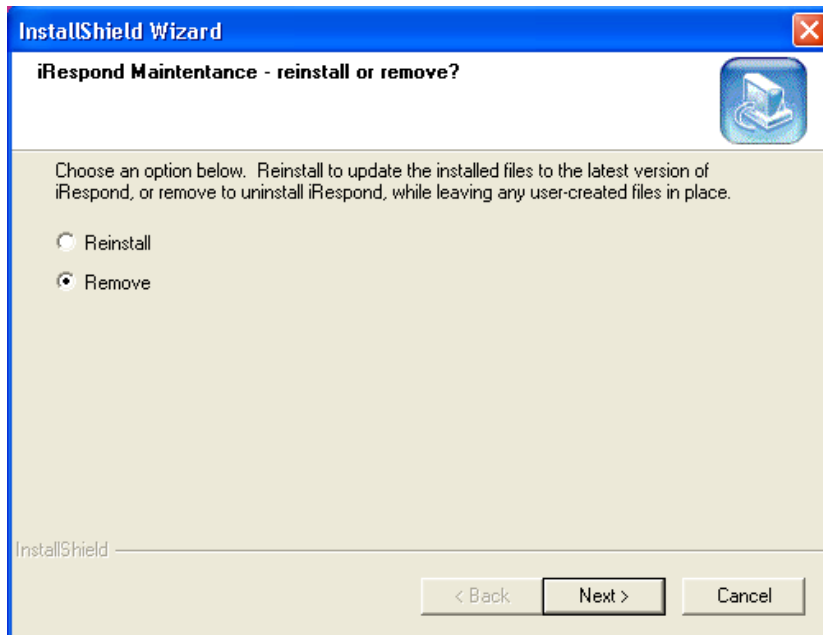

2. After the file has completed downloading a new window will open asking if you still wish to run the software. Select Run.

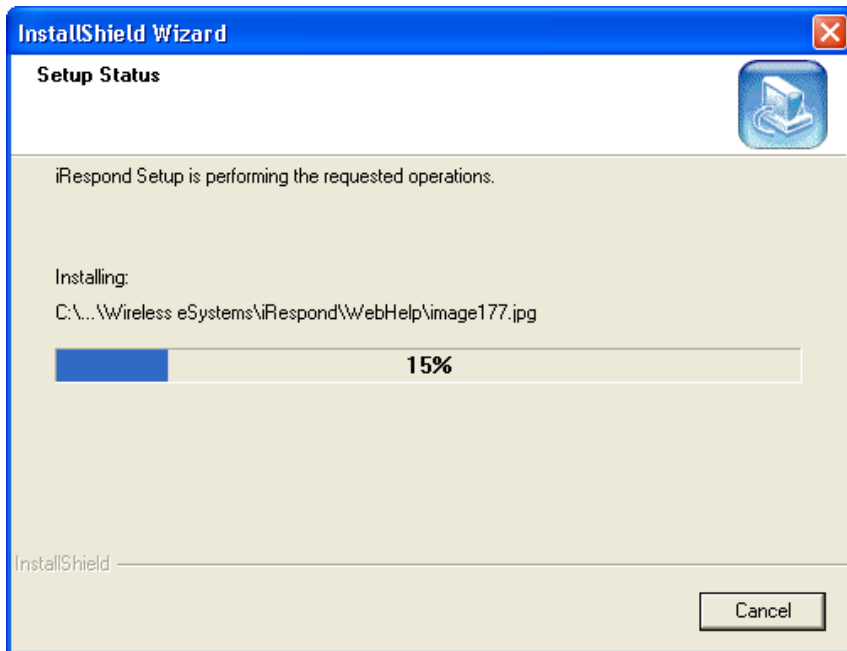

3. Select Ok at the next window. The iRespond files will then begin extracting.

4. The InstallShield Wizard will open up. There are two options: Remove iRespond or Reinstall iRespond. Remove deletes all iRespond components, it does not delete any files such as test banks, class roster, or remote devices in the iRespond folders created during admin setup. Reinstall updates the iRespond software. Select Reinstall and select Next >.

5. iRespond will now begin updating.

6. Follow the onscreen directions to update iRespond. After installation is complete, select Finish. You have successfully updated you iRespond software.
